

longbeach snapshot

The City of Long Beach is creating a new General Plan and we invite you to participate. The new General Plan will guide and control changes to the urban fabric of Long Beach for the next 20 years.

This collection of city images and information is a "community snapshot." Please use this **snapshot** as a starting point for your active participation in the General Plan Update process. We hope that it will inspire you and other residents to improve our land use policies.

The **snapshot** provides a basic understanding of how the city looks now. It does not cover everything and it is not a policy document. A companion **toolkit** describes potential policy responses to some of the issues raised here. We hope that the **snapshot** helps you think about your community, quality of life, and your vision for the future of Long Beach.

Who is Long Beach?

We are Diverse

We are the fifth largest California city. With 475,460 residents in 2003, our population has increased by 11 percent since 1990.

We are also one of the most ethnically diverse communities in California. Long Beach is 36 percent Hispanic, 33 percent White, 14 percent Black and 12 percent Asian.

Income & Poverty

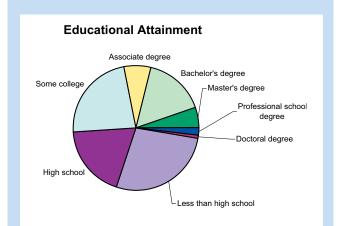

In the past ten years our average buying power has not increased. Median annual income has remained virtually constant at \$54,700 per household (in 2000 constant dollars).

Similar to national trends, Long Beach's middle class is shrinking. The percentage of well-off households (earning more than \$100,000 per year) has doubled since 1990. Likewise the number of people living in poverty has increased by 48 percent. Today, fully one fifth of Long Beach residents live in poverty and half of the poor are children.

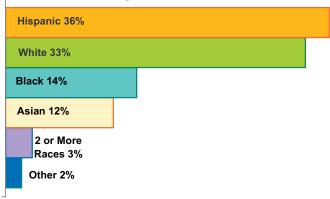

How can we rebuild our middle-class and improve opportunities for our less advantaged residents?

Education

Similar to the County of Los Angeles, 27 percent of Long Beach adults do not have a high school diploma, while 24 percent have a four-year college degree or higher.

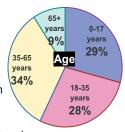

Long Beach Residents

Age and Aging

Similar to national trends, Long Beach's aging baby boom population will soon retire while our youth population continues to grow.

- Over the next ten years 47,000 Long Beach residents will retire: by 2024, over 110,000 or 25 percent of our population will retire. Will we create enough housing for our elderly?
- Today 108,000 school-age children live in Long Beach. Fully 29 percent of our population is under 17 years of age. <u>Are we doing enough to teach and nurture our kids?</u>

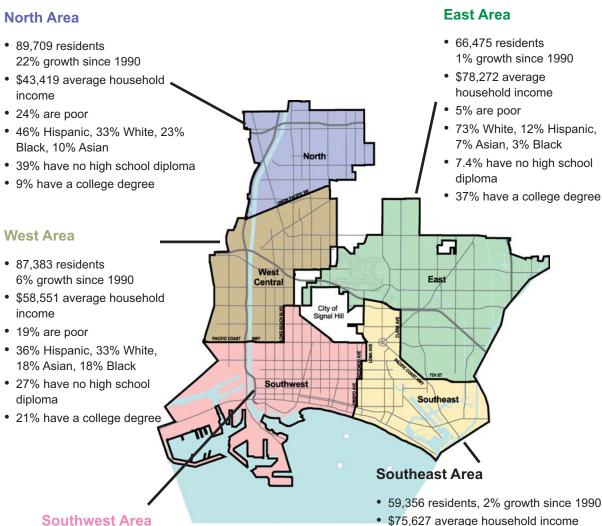

Source: US Census, 2000

Where we live depends on who we are and what we earn...

We are a city of more than 50 distinctive neighborhoods. The North and Westside have experienced greater population growth and are home to a more diverse population with lower incomes and educational attainment. The Eastside has experienced little population growth and is home to residents with higher incomes and higher educational attainment.

- 158,599 residents, 5% growth since 1990
- \$37,408 average household income
- 36% are poor
- 49% Hispanic, 18% White, 15% Black, 13% Asian
- 42% have no high school diploma
- 15% have a college degree

- \$75,627 average household income
- 9% are poor
- 70% White, 13% Hispanic, 7% Asian, 6% Black
- · 6% have no high school diploma
- 47% have a college degree

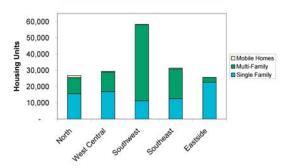

What about housing?

Our housing

Housing density means different things to different people. In 2000, Long Beach was the 52nd most dense city in the United States with over 9,149 people per square mile. Cities with higher densities than Long Beach include: San Francisco, Huntington Park, Santa Monica, Santa Ana, Bellflower, and Redondo Beach to name a few.

Long Beach has 172,000 housing units. Single family homes make up 46 percent while apartments and townhomes comprise 52 percent of all units.

From a land use perspective single family homes use 75 percent of all residential land, while higher density multifamily units comprise 10 percent, and town homes and duplexes make up 14 percent.

Between 1990 and 2002, 4,711 total new housing units were added to Long Beach, an increase of 2.7 percent, far below the 10.7 percent increase in total population.

What are the consequences of not building enough housing to keep pace with population growth?

Many homes are overcrowded

Overcrowding within the home is one consequence of low housing production and moderate population growth. Fully 22.5 percent of all units in Long Beach were overcrowded in 2000, which represented a 40 percent increase in the number of overcrowded units from 1990. Long Beach housing is significantly more overcrowded than housing in L.A. County. Over-crowding means that adults and children are doubling and sometimes tripling up in each room.

Housing costs are up

Like all California cities, Long Beach has experienced a rapid increase in housing costs.

• The median price for a single family home in Long Beach jumped to \$462,000 in June 2004, an increase of 37 percent from June 2003.

By comparison, the median price paid for a Southern California home was up 26 percent to \$406,000 during the same period.

Only 12% of Long Beach households can afford a home at today's prices. Only 31% can afford a condo.

 The median price for a condominium in Long Beach was \$295,000 in June 2004, an increase of 21 percent over 2003 prices.

How can we ensure that our kids will be able to buy a home here?

Rents are up

- Area median rents increased by a dramatic <u>116 percent</u> from \$532 in 1999 to \$1,150 in July 2002.
- At today's rents, 47 percent of households cannot afford their rental units – i.e., they spend more than 35 percent of their household income on rent. One quarter of households spend more than half their income on rent.

What are the impacts of high and rapidly increasing rental rates on our families and communities?

Open space

Open space is important to our quality of life and the

health of our families. Overall Long Beach has one acre of open space for every 182 residents, which is good for a built-out city. However the open space is unevenly distributed. Northern neighborhoods average 1,106 people per open space acre, while Eastern neighborhoods average 58 people per acre of open space.

Housing patterns by neighborhood

Long Beach's neighborhoods are readily identified by their residential development patterns. The North, West and Southside have more multi–family units, overcrowding within housing units, lower home prices, more renters and fewer parks. The Eastside has more single family homes, very low rates of overcrowding, and higher housing prices. The Southwest has seen the greatest increase in new housing units over the past 14 years.

North Area

- \$317,000 median home price
- 35% of units are overcrowded
- 44% owner-occupied
- 58% single family homes
- 1,106 people per open space acre
- 549 new housing units since 1990, a growth of 2.1%

West Central Area

- \$393,000 median home price
- 24% of units are overcrowded
- 50% owner-occupied
- 57% single family homes
- 201 people per open space acre
- 1,126 fewer housing units since 1990, a decline of 3.7%

East Area

East

Southeast

- \$507,000 median home price
- 4% of units are overcrowded
- 81% owner–occupied
- 88% single family homes
- 58 people per open space acre
- 73 new housing units since 1990, a growth of 0.3%

Southwest Area Southeast Area

West

Southwest

- \$339,000 median home price
- 34% of units are overcrowded
- 18% owner-occupied
- 19% single family homes
- 610 people per open space acre
- 1,469 new housing units since 1990, a growth of 2.6%

- \$633,000 median home price
- 5% of units are overcrowded
- 39% owner-occupied
- 40% single family homes
- 97 people per open space acre
- 315 new housing units since 1990, a growth of 1%

Where do we work?

Competitive Economy

The services, technology & manufacturing, trade, and tourism sectors form the core of our economy. Between 1992 and 2000, the city added a net total of 7,000 jobs. However most of the new jobs were created in the relatively low-paying service (+16,570 jobs) and retail (+5,579 jobs) sectors. Job loss was greatest in well-paying sectors of aerospace/defense (-16,828 jobs) and government (-2,211 jobs).

- Boeing, Gulf Stream, Verizon, TABC, the Bragg Companies, and Epson make Long Beach an epicenter of technology and manufacturing.
- Long Beach is headquarters to the largest university system in the world, California State University. It is also home to CSU Long Beach, Long Beach City College, Devry University and Brooks College.
- The Port of Long Beach is the second busiest container seaport in the United States. It contributes significantly to the competitive strength of Long Beach's trade sector.

Can we bring middle-class jobs back to Long Beach?

Retail Trade

Some of our retail stores (specialty retail¹, building materials, and eating & drinking places) attract more than their share of total sales per capita when compared to the State average. For example, Long Beach specialty retail stores sell 249 percent more on a per capita basis than specialty retail stores overall in California. At the other extreme, our auto dealers sell only 28 percent of what statewide auto dealer sell on a per capita basis (see table). Overall our stores attract about half of their fair share of retail sales on a per person basis. Many residents leave town to purchase big ticket items such as cars, home furnishings, appliances, and apparel.

What can we do to keep our shopping at home?
How do our shopping patterns impact the success of our retailers and our City's sales tax revenues?

1. Specialty retail includes: gifts, art goods, novelties, sporting goods, florists, photographic equipment and supplies, musical instruments, stationery and books, jewelry, office, store and school supplies.

Long Beach Employment by Cluster, 2000

	Total	Percent
Services	56,777	35%
Retail Trade	28,192	17%
Technology, Manufacturing	21,109	13%
Trade, Transportation,		
Warehousing, Utilities	20,664	13%

Construction	6,731	4%
Agriculture, Mining, Fishing	1,392	1%
Non-Classified	9,925	6%
Total Employment	163,735	100%

Long Beach Sales Per Capita as a Percent of Statewide Sales Per Capita

Occupations & Pay

Long Beach has experienced a decline in higher-paying jobs, particularly in aerospace and defense. Many of these relatively good-paying jobs have been replaced with lower-paying service sector jobs.

One—third of our labor force are managers or professionals, while 27 percent work in sales and clerical positions, 16 percent are in service occupations, 15 percent labor in production occupations, and 8 percent work in maintenance occupations.

Workers per Family

Half of our families had two or more workers in 2000. Fifty-two percent of residents age 16 and over work full time.

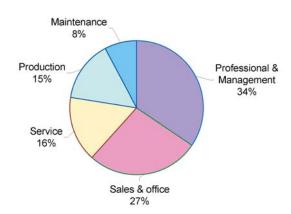

Unemployment

Long Beach has lower unemployment at 6.5 percent than LA County's 7 percent. However, some neighborhoods have higher rates of unemployment than others.

What are our economic priorities? How can we best express them in the land use priorities of the Long Beach General Plan?

Getting around Long Beach

How do we get to work?

One third of us live and work in town, while most of us (60 percent) commute to work in other cities in the L.A. basin.

- Most of us (76 percent) drive to work alone, while 11
 percent carpool, and a minority take public transportation (7 percent), bike or walk (3 percent), or work from home (3 percent).
- Thirty-six percent of us get to work in less than 20 minutes. Ninety percent of us commute to work in under an hour.

Parking

Several older higher density areas in the city have onstreet parking shortages due to parking demand from nearby commercial or beach areas or limited on-site parking. The most parking-impacted neighborhoods are indicated below.

Auto Traffic

Traffic is becoming a problem throughout the U.S. because we are driving more and further. Some areas of Long Beach, however, are seriously impacted by specific traffic issues:

- Very high traffic volumes (in excess of 50,000 vehicles per day) on Ocean Boulevard, in the Harbor District, Seventh Street near the I–710 and east of PCH, and on PCH south of the traffic Circle.
- Traffic congestion at a variety of locations, including: Santa Fe Avenue, Long Beach Blvd., Atlantic Blvd., Bellflower Blvd., Studebaker Rd., Artesia Blvd., Willow Street, PCH, Seventh Street, Ocean Blvd.

Mass Transit

While only 7 percent of Long Beach residents use mass transit to commute to work, many residents use it for other purposes, and many visitors to Long Beach and non-residents working here also use mass transit thereby reducing congestion on our streets.

Long Beach Transit (LBT)

serves more than 25 million boarding passengers per year making it the largest municipally operated transit system in LA County. LBT operates 38 fixed routes and a variety of other transit alternatives.

The **Blue Line** metro rail provides service from downtown Long Beach to downtown LA, the Green line, and the Red line. The Blue Line serves 74,000 passengers per day and 22 million per year, making it the busiest light rail line in the U.S.

The downtown **Transit Mall** brings together Long Beach Transit, the Blue Line, and a bike station.

How can our transit providers better serve your needs?

Long Beach Airport

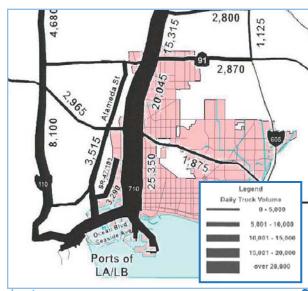

- In 2003 the Airport served 2.9 million travelers.
- The Airport is served by America West, JetBlue, American and Alaska Airlines. There are over 200 businesses located on Airport property.

The Port & Trucks

- The container volume at the Port is expected to double by 2010 from 10 million to 20 million containers annually.
- Over 25,000 trucks visit the Port daily to collect and drop cargo. Truck traffic is likely to increase as container volumes double, especially if transportation alternatives are not put in place.
 Currently, 25 percent of containers are moved via the Alameda Corridor rail expressway. Major truck routes include Alameda Street and the 710 and 110 Freeways.

How can Long Beach reduce the negative impacts of airport and port growth while retaining the positive economic benefits?

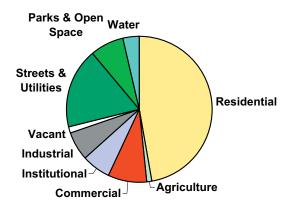

Average Daily Truck Volumes, 2003

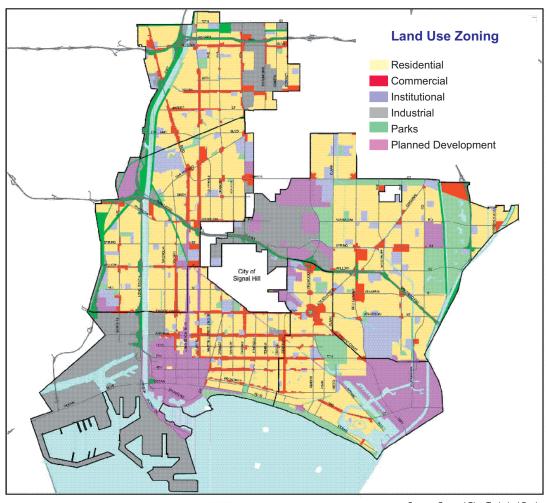

How does land use affect my neighborhood?

Land is one of our most valuable resources. How we plan for and control land use impacts property values, the character of our neighborhoods, our access to housing, jobs, shops, and even our safety.

Long Beach Land Use

Long Beach Land Use

Where and how will we develop?

Long Beach is largely a "built out" city. Only two percent of Long Beach's land is vacant, so most new development will happen in difficult to develop in-fill sites and include re-use of existing buildings.

Recent Development

- Long Beach added 4,711 new residential units between 1990 and 2002. Seventy-five percent of the new units were multi-family and 25 percent were single
- · Long Beach has added \$435 million worth of new nonresidential development since 1990 (about \$36 million per year). Eighty-five percent of new development was commercial and 15 percent was industrial.

How should we balance our need for housing with our

Total Development & Future Demand

- · Through 2010 there is demand for an additional 12,000 housing units in Long Beach, or three times the current rate of construction.
- · Overall, Long Beach currently has 38 million square feet of industrial space, 5.3 million of retail and 8.9 million of office space. See table below.
- · Preliminary estimates indicate demand for an additional 2 million square feet of office, 1.5 million of industrial, and 500,000 of retail development by 2010.

What are our land assets and issues?

To date, over 120 Long Beach residents have participated in a series of 20 community meetings. These residents identified the following key issues and assets in Long Beach:

Key Community Assets

Diverse neighborhoods

Diverse economy and jobs

Affordable and quality housing

Great climate

Central location in the region

Quality schools and parks

Variety of cultural activities, theaters and arts

Good transportation system

Long Beach City College

California State University - LB

Vibrant downtown

Community oriented policing

Key Community Issues

Overcrowding in housing and schools

Lack of park facilities and open space in some areas

Increasing traffic congestion on certain streets

Lack of parking in certain areas

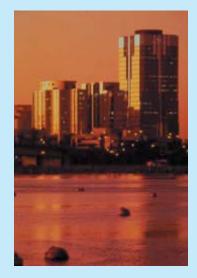

Gangs, graffiti, homelessness, and prostitution in some areas

Lack of community services (banks, grocery stores) in certain areas

Blighted housing and blighted commercial buildings in certain areas

Air, noise and water pollution

Too many liquor stores and bars in some areas

Community Vision

Community members were asked to identify their key goals and vision for the future as part of the general plan update process. Key goals include:

Housing

- Develop more market rate, affordable and senior housing
- · Increase homeownership
- · Reduce the number of homeless families
- · Reduce blight
- · Develop more mixed-use and townhome projects
- Mix apartment, single-family and townhomes in the same area
- Consider sustainable building technologies for residential development
- Undertake more code enforcement to improve maintenance of properties
- · Provide for higher density development in downtown
- · Undertake neighborhood preservation activities

Public Services & Infrastructure

- Improve and upgrade streets, consider narrowing some city streets, repair alleys, increase parking in some areas
- Add more street medians, streetlights and better lighting at intersections, add trees and plants to streets
- Install sound walls along busy streets and highways, clean streets
- Improve pedestrian friendliness of streets, increase pedestrian access in retail corridors, widen sidewalks, add more bike paths and add more traffic calming design features.

Community Facilities

- · Establish more community, cultural and senior centers
- Provide more after school, youth recreation, teen centers and youth support services and programs

· Establish a recycling center

Neighborhood Character

- · Create a more walkable community
- Beautify and clean empty lots, roadways, parks, etc.
- Provide more parks and open space, community gardens, trees, playgrounds, natural preserves, more playing fields, and add sculpture and fountains in public areas
- · Encourage a creative safe and livable community
- · Reduce gang violence and create drug-free areas
- · Reduce graffiti and remove dumped items
- · Underground all transmission and electrical wires
- Provide more community policing and a community police station
- · Encourage quality design and architecture
- · Reduce air pollution

Commerce & Employment

- · Fill empty store fronts with new businesses
- Increase the number of vibrant pedestrian-focused shopping areas
- Attract full service grocery stores, drug stores, book stores, outdoor eateries, coffee shops, banking facilities, apparel retailers, furniture, arts and crafts businesses, and office supply stores.
- Reduce the number of bars, liquor stores, and auto repair shops
- · Keep a wide variety of businesses
- Support small and local businesses
- · Increase the number of jobs
- Provide for quality shopping, less Wal-Mart and Target-like stores

What is your vision for Long Beach?

What does our future hold?

While projecting growth is an inexact science, recent projections by the Southern California Association of Governments give some insight as to how our city will change in the future.

New Residents. The City of Long Beach is projected to grow by 11 percent, or 54,000 people, by the year 2025 when our population will reach 544,000 people.

New Jobs. During this same time period we will add some 45,000 new jobs to our current job base for a total of 238,000 jobs in 2025.

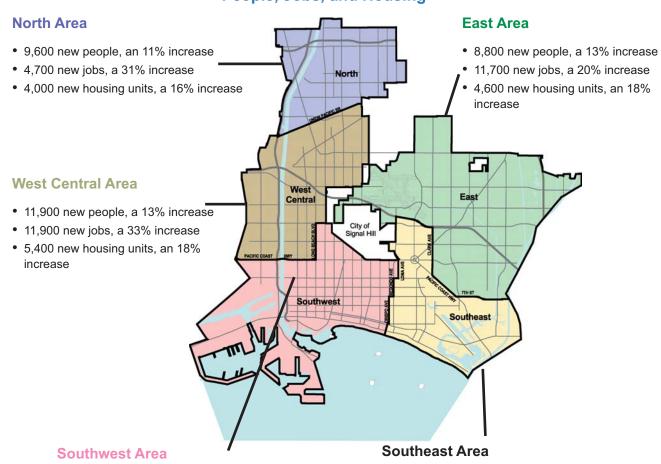

New Housing. Our new residents will require approximately 25,000 new housing units as the number of households increase from 166,000 to 191,000 in 2025.

Growth Projections, City of Long Beach, 2005-2025							
	2005	2010	2015	2020	2025	Change	
Total Population	489,528	503,450	518,627	533,590	543,937	54,409	
Total Households	166,144	171,723	178,252	184,906	191,482	25,338	
Total Jobs	192,568	213,998	222,549	230,774	238,440	45,872	

Source: SCAG, 2004 RTP

The map below outlines growth estimates by Long Beach neighborhood. However, actual development and growth patterns will be subject to changes made to the General Plan.

Long Beach Growth Projections for 2025 People, Jobs, and Housing

- 14,700 new people, a 9% increase
- 12,500 new jobs, a 21% increase
- 6,900 new housing units, a 13% increase
- 9,400 new people, a 12% increase
- 5,100 new jobs, a 21% increase
- · 4,300 new housing units, a 14% increase

Next Steps...

In this document, we have provided data and information to inform you about our community. We hope that it has illuminated some of the changes we face as we move forward. Our city has always been a place of dynamic change and it will continue to evolve into the future. We hope that you will assist us as we plan for these changes through the update of the City's General Plan.

We will host a number of meetings through 2005 and hope that you will participate in as many as you like. It is your opportunity to shape our future and our children's future in Long Beach.

Upcoming meetings...

- · Ten Community Cluster meetings, Spring '05
- · Planning Commission Study Session, Spring '05
- · City Council Study Session, Spring '05
- · City-wide workshop, late Spring '05
- · Five Community Cluster meetings, late Spring '05
- · Planning Commission Study Session, Summer '05
- · City Council Study Session, Summer '05
- Public Hearing, Fall '05

Advance Planning Bureau City of Long Beach 333 West Ocean Boulevard, 7th Floor Long Beach, California 90802

How do I get involved?

- Check out our website which details lots of information, maps, and a meeting schedule: www.longbeach.gov/plan.
- √ Attend one or more community or citywide General Plan Update advisory meetings.
- √ Send your comments on land use and mobility issues to City staff.
- √ Ask to be notified by email of upcoming community or citywide meetings on the General Plan Update.
- Participate in public workshops to get informed, confirm issues, test the vision and land use policy options, and confirm recommendations.
